

RECAP

Research How-To Guide

University of Miami • Internal Medicine Residency

Who to contact, what to prepare, and what to do next - with cited sources.

How to use this guide

This guide combines action-oriented step-by-step workflows with comprehensive detail on every resource. Each section includes a "Have this ready" checklist, step-by-step instructions, verified contact information, and numbered superscript citations linking to official UM sources.

Superscript numbers like ¹ refer to sources listed in the References section at the end. Numbers are assigned in the order each source first appears in the document.

Quick navigation — find your starting point

What I need	Best first stop	Contact / Portal	Then do this
Don't know where to start	Research Compass / Navigator ^[1,2,3]	Navigator@miami.edu	Go to the resource they route you to
Patient data or plan to publish	HSRO / IRB / IBISResearch ^[4,5,6]	ibis-research.miami.edu/IRB	Then Data Broker or REDCap
Cohort from UChart / Epic	Data Broker Services ^[7,8]	UHealth IT ServiceNow Portal	Then REDCap + BCCC
Study design or analysis help	BCCC ^[9,10,11]	MJRodriguez@biostat.med.miami.edu	Meet before final data pull
Systematic review / lit search	Calder Library — Evidence Synthesis ^[12,13]	jxr1327@med.miami.edu	Covidence for screening ^[19]
Manuscript or abstract polish	Writing Center ^[14,15]	miami.mywconline.com	They will help at any stage of the writing process.
REDCap setup or questions	REDCap Admin ^[16,17,18]	help@med.miami.edu (subject: REDCap)	Complete Decision Tree Survey after account creation
Publishing / avoid paying APC	UM Libraries Open Access ^[27]	guides.library.miami.edu/open-access	Check Open Journal Finder first

1. Retrospective Chart Review

Quick sequence: idea + mentor + protocol → HSRO/IBISResearch → approval → Data Broker → REDCap/abstraction → analysis → writing → submission

The most common first resident project - and the most likely to become disorganized if the protocol, data request, or database structure are vague. Follow each step in order; you cannot start data collection without IRB approval.

Step 1 — Define the question and build a protocol

Before contacting any office, align with your mentor on the exact study question, design, and scope.

Have this ready before any external contact:

- Working title and one-sentence research question
- Study population: inclusion and exclusion criteria
- Study period, primary outcome, and secondary outcomes
- Rough variable list (lean is better — you can add later)
- Faculty mentor name and likely authorship team

Write a short protocol (2–4 pages). Define the exposure, comparison group, and outcome up front. Keep the variable list lean; you can refine it before the data request.

Step 2 — Submit through HSRO / IRB in IBISResearch

All human-subjects research at UM — including retrospective chart reviews and studies meet exempt categories — must be submitted in IBISResearch for IRB review. The UM IRBs serve as IRB of record for Jackson Health System as well.^[4,5,6]

Have this ready:

- Protocol with clear study design ([Use applicable UM templates](#))
- Study team list (all UM employees get IBISResearch access automatically)*
- Data source, setting, and confidentiality / storage plan
- Consent/HIPAA an explanation in the protocol of why obtaining authorization is not practicable
- Other study documents, as applicable (e.g., questionnaires, surveys)

* Account Request, if needed: Research Suite Account Access Request Form

[Ibisresearch submission process](#)

Irb portal: ibis-research.miami.edu/irb^[4,5,6]

Hsro submission guidance: hsro.uresearch.miami.edu/submit-to-the-irb/how-to-submit-to-the-irb/index.html^[4,5,6]

Not sure if you need irb?: use the [nhsr self-certification tool](#) first. If determined not human subjects research (nhsr) and you plan to publish, you can submit **the report** along with **a description of the project** (protocol) to hsroletterrequest@miami.edu for a written irb opinion.^[21]

Review types & timelines: exempt: ~2 wks · expedited: ~2 wks · full board: ~6 wks — all route through ibisresearch^[22]

NOTE:

- Designate a UM faculty member as the PI.
- Only the PI or an approved PI Proxy may submit the study; remind the PI to submit the application or request a Proxy role if the PI agrees.
- Respond promptly to IRB reviewer comments and submit the response.

 **RECAP Tip:** Studies meet the definition of [Human Subjects Research](#)^[Reg.1,Reg.2] must be submitted in ibisresearch for IRB review (exempt, expedited, or full board). At UM, investigators are not permitted to self-determine whether their research qualifies for exemption. All Human Subjects Research—including studies that may qualify as exempt—must be submitted through ibis-research for the IRB to render a formal determination. Data collection may not begin until an IRB determination, or approval letter has been issued..^[22,21]

Additional information: <https://hsro.uresearch.miami.edu/resources-and-guidance/index.html>

IRB office hour information: <https://hsro.uresearch.miami.edu/contact-us/virtual-office-hours/index.html>

Step 3 — Request the dataset through Data Broker Services

Once the study is cleared by IRB, request clinical data through Data Broker Services. This service handles UChart (Epic) extractions, large data pulls, and enterprise data transfers for research.^[7,8]

Have this ready:

- IRB approval or determination letter
- Exact inclusion/exclusion criteria and date range
- Complete variable list with definitions
- Decision: identifiers vs. de-identified vs. limited dataset
- Whether you need a feasibility count, patient list, or full extract

How to submit a Data Broker request

Portal: uhealth.service-now.com/esc — log in with SSO + Microsoft Authenticator MFA^[7,8]

Navigate to: Catalog Filters → Data Services → Data Broker Services (Clinical) Request^[7]

Under Service Requested: Select "Clinical Data (Research/Operations)"^[7]

Complete: All required fields, attach protocol and variable list, accept Terms and Conditions^[7]

Track your request: uhealth.service-now.com/esc?id=my_requests^[7]

Pre-request scoping: Epic SlicerDicer (in UChart) can be used for exploratory cohort scoping before a formal Data Broker request^[8]

 **RECAP Tip:** Start focused. Residents often ask for too many variables early. A lean first request is faster to fulfill and easier to clean. You can submit a follow-up request if needed.^[7]

Step 4 — Build the REDCap database before abstraction

REDCap is the safest default for most resident chart-review projects. It is free to all UM faculty, staff, and students, HIPAA-compliant, and hosted by UM IT. It exports directly to SPSS, Stata, R, or SAS.^[16,17,18]

How to get started with REDCap

Create account: redcap.miami.edu — CaneID login, no separate access form required^[18]

Next: Click "Request New Project" and complete the Decision Tree Survey. A ServiceNow ticket auto-generates.^[16,17]

Support: Email help@med.miami.edu with "REDCap" in the subject line — auto-routes to a REDCap administrator^[16]

Training: BCCC and Calder Library Biomedical Data Services both offer REDCap-specific training^[17,23]

 **RECAP Tip:** Build the REDCap project before abstracting any charts. If more than one resident is abstracting, create a short abstraction manual and pilot on 5–10 records first. Messy abstraction creates messy analysis.^[16]

Step 5 — Analyze the data

Two practical routes depending on your methods needs:

Approach	Details
Path A — Software & self-directed	Best for descriptive stats, basic comparisons, straightforward logistic or linear regression. Free SPSS: it.miami.edu/a-z-listing/spss-statistical-package Questions: software@miami.edu ^[24]
Path B — BCCC Collaboration	Best for multivariable modeling, survival analysis, matching, sample size/power, or any analysis you are not confident designing yourself ^[9]
BCCC contact	Maria Jimenez-Rodriguez MJRodriguez@biostat.med.miami.edu 305-243-4465 Initial consultation free; subsequent work fee-based ^[9,10,11]
BCCC Office Hours	Free 30-min consultations: Tue/Wed/Fri 10 am–12 pm, Wed/Fri 2–4 pm. For quick statistical advice only — not data analysis or manuscript work ^[10]
Calder Data Services	Data cleaning, method selection, visualization support: sp.library.miami.edu/subjects/biomedicaldata ^[23]

Step 6 — Write the manuscript

Do not wait for the final analysis to start writing. Draft the methods section and table shells early. The Writing Center provides writing support for residents writing manuscripts, abstracts, grant proposals, and poster presentations.^[14,15,25]

Writing Center options for residents at Miller School / Jackson

General appointments (50 min): miami.mywconline.com

Research / manuscript / grant consults: medwritingcenterum.youcanbook.me — grants, articles, posters, presentations^[15]

CTSI Research Writing Support: miamictsi.org/resources/support-services/ — Miller School faculty, post-docs, graduate students^[25]

General library reference: reference@med.miami.edu | Mon–Fri 9 am–5 pm via Zoom (5 business days' notice for group sessions)^[26]

RECAP Tip: While you go to the Writing Center with a real draft and 2–3 focused questions, they can also help you with earlier stages, such as brainstorming and organization. Some people prefer to draft methods first, then tables, results, introduction, discussion, and abstract last. Others begin with the abstract, which functions as a working outline of the whole project.^[14]

2. Systematic Review or Meta-Analysis

Use this path when your study question will be answered by a structured literature review rather than patient-level data from your own charts.

Step 1 — Define the review type

Decide whether it is a systematic review, scoping review, or meta-analysis before searching. The type affects your protocol, databases, screening approach, and reporting standards.^[12,13]

Review Type	Reporting Standard & Key Distinction
Systematic Review	PRISMA checklist. Answers a focused clinical question; all steps pre-specified.
Scoping Review	PRISMA-ScR + JBI Handbook. Maps breadth of evidence; broader inclusion criteria.
Meta-Analysis	PRISMA + MECIR (Cochrane). Quantitative pooling — requires BCCC statistical involvement.
Rapid Review	Abbreviated methods; acceptable for some clinical questions with explicit limitations.

Step 2 — Contact Calder Library early (most important step)

Calder librarians collaborate directly on systematic reviews, scoping reviews, and meta-analyses for all Miller School, UHealth, and Jackson affiliates. All services are free.^[12,13,26,19]

Two Service Tracks

Collaboration Track: Full partnership — librarian becomes a named co-author. Includes complete multi-database search strategy, Covidence setup, methodological guidance, and drafting of the search methods section of the manuscript. Typically a waitlist due to high demand — contact early.^[12,13]

Consultation Track: Guidance for self-directed reviews. Includes search strategy consultation, database selection, citation manager training, and attribution in the acknowledgments section. Typically a shorter wait.^[12]

Evidence Synthesis Contact

Coordinator: John Reynolds, Reference and Education Librarian^[12]

Email: jxr1327@med.miami.edu^[12]

Guide: medguides.library.miami.edu/evsynth^[12]

Databases covered: MEDLINE/PubMed, Embase, Cochrane, Scopus, Web of Science, and others^[12,13]

Also provides: Cochrane Interactive Learning tutorials (free via UM subscription), Covidence access, citation manager guidance (EndNote, RefWorks, Zotero)^[13,19,26]

Step 3 — Draft the protocol first

Write the PICO question, eligibility criteria, databases, outcomes, and screening plan before title-and-abstract review starts. Register in PROSPERO if you plan a systematic review — many journals now require it.^[12,13]

Before contacting Calder Library, complete:

- Cochrane Interactive Learning tutorials (free via UM institutional subscription)
- Review MECIR checklist (systematic reviews) or PRISMA / PRISMA-ScR (all review types)
- Draft protocol with PICO question and inclusion/exclusion criteria
- Identify target databases beyond PubMed (Embase, Cochrane, Scopus, etc.)

Step 4 — Use Covidence for screening and extraction

Covidence is the standard tool at UM for dual-reviewer screening, full-text review, risk of bias assessment, and data extraction.^[19]

Covidence — Free Institutional License

Access: Free unlimited institutional license for all UM students, faculty, residents, and staff^[19]

UM Covidence info: support.covidence.org/help/the-louis-calder-memorial-library-university-of-miami^[19]

Features: Title/abstract screening, full-text review, risk of bias assessment, data extraction, PRISMA flow diagram generation, multi-reviewer conflict resolution

Step 5 — Involve BCCC if planning meta-analysis

If the study will include a meta-analysis, ask BCCC for methods input before data extraction is finalized. Effect measure choice, heterogeneity assessment, and subgroup analyses must be pre-specified. Contact BCCC: MJRodriguez@biostat.med.miami.edu.^[9,10,11]

Timeline Benchmark	Typical Duration
Protocol development	4–6 weeks (with librarian consultation)
Search execution — librarian-led	2–3 weeks
Search execution — self-directed	4–6 weeks
Title/abstract screening	4–8 weeks (depends on results volume)
Full-text review	3–6 weeks
Data extraction	4–12 weeks (depends on included studies)
Analysis and writing	8–16 weeks
Total project duration (UM internal data)	Average 55–67 weeks

 **RECAP Tip:** Systematic reviews typically take 12–18 months. Contact Calder Library as soon as you have a topic — there is typically a waitlist for the Collaboration Track.^[12]

3. Quality Improvement Project

Use this path when the primary goal is to improve a local process, workflow, or outcome in your clinic, service, or hospital setting.

Step 1 — Define the local problem and metric

Clarify the process you want to change, your baseline measure, your intervention, and your follow-up measure before involving anyone else.

Step 2 — Decide: QI only, or QI plus scholarship

If publication or research dissemination is planned, contact HSRO early. Use the NHR Self-Certification Tool if uncertain, or email HSROletterrequest@miami.edu for a written opinion.^[21,22]

HSRO Quick Reference for QI

NHR Self-Certification Tool: hsro.uresearch.miami.edu/submit-to-the-irb/does-my-project-need-review-by-the-irb/index.html^[21]

IRB opinion request: HSROletterrequest@miami.edu — required if you plan to publish results of work determined to be NHR^[21]

Step 3 — Build a data-capture system

Use REDCap or another approved UM environment to track the measure consistently over time. See Section 1, Step 4 for full REDCap setup instructions.^[16,18]

Step 4 — Involve statistical support early

Before-and-after analyses, run charts, and statistical process control charts are significantly easier when planned early. Contact BCCC: MJRodriguez@biostat.med.miami.edu | 305-243-4465.^[9,10]

Step 5 — Keep the intervention simple and measurable

Define the measurement cycle before starting the intervention. QI projects work best when the intervention is clear and the outcome can be tracked over time.

Step 6 — Write with the discipline of a research report

Use SQUIRE 2.0 guidelines for reporting QI work. Document the baseline problem, intervention, implementation period, metric, and limitations clearly. Writing Center support applies here as well.^[14,15]

4. Submit and Publish

Before submission, confirm authorship, journal fit, figure requirements, and whether there are publication costs.

- Check the journal's author instructions before final formatting, including instructions about acknowledging ai use.
- Use trusted journals. Be cautious of unsolicited email invitations. Verify journals in DOAJ or check with a Calder librarian.^[13]
- Before paying an article processing charge (APC) out of pocket, check UM Libraries open-access support.^[27]

UM Libraries Open Access and APC Funding

Who is eligible: Any corresponding author with a current UM affiliation (faculty, staff, student, resident). Use @miami.edu email at submission.^[27]

PLOS (12 journals): Full APC coverage — unlimited articles^[27]

Institute of Physics / IOP (75+ journals): Unlimited articles — check current agreement dates^[27]

Wiley: Hybrid and gold open access — 199 articles/year cap^[27]

Frontiers (213+ journals): Flat-fee open access agreement — unlimited articles, check agreement dates^[27]

Cambridge University Press: Read & Publish transformative agreement — 2025 onwards^[27]

Company of Biologists (5 journals): Unlimited articles through 2026^[27]

Royal Society of Chemistry: Qualifying RSC journals — check current agreement dates^[27]

Open Journal Finder: https://university-of-miami.openjournalfinder.com/journals/?has_active_deal=true^[27]

Scholarship@Miami: scholarship.miami.edu — UM institutional repository. Deposit accepted manuscripts here for open access even when the journal itself is not open access.

OA Contact: Jason Cohen, Digital Publishing Specialist — j.cohen4@miami.edu

 **RECAP Tip:** Check the Open Journal Finder before you submit. Many high-quality journals are covered by UM agreements, potentially saving \$1,000–\$3,000 in APC costs.^[27]

5. Core UM Resources

Every resource below is free for UM Internal Medicine residents unless otherwise noted. Contact information verified April 2026.

Research Compass and Research Navigator

Detail	Information
What it is	Research Compass is a dynamic interactive tool guiding you through the UM research lifecycle. Research Navigator is a one-on-one concierge service staffed by human advisors. ^[1,2,3]
When to use	When you are not sure which office owns your next step, or when you need a human to help navigate the system.
Contact	Navigator@miami.edu ^[1,2]
Research Compass	miamictsi.org/resources/navigating-research/research-compass/ ^[3]

HSRO / IRB / IBISResearch

Detail	Information
What it is	Human Subject Research Office (HSRO) administers IRB review for UM and Jackson Health System. All human-subjects research must receive review in IBISResearch before commencement. ^[4,5,6]
When to use	Any project using patient data, identifiable information, recruitment, consent, or biospecimens — including retrospective chart reviews. ^[21,22]
IRB portal	ibis-research.miami.edu/IRB ^[4,5,6]
NHSR self-check tool	hsro.uresearch.miami.edu/submit-to-the-irb/does-my-project-need-review-by-the-irb/index.html ^[21]
NHSR letter request	HSROletterrequest@miami.edu ^[21]
Investigator Manual	Required reading for all PIs — available at HSRO website ^[4]
Review timelines	Exempt: 2–3 wks · Expedited: 2–4 wks · Full Board: 4–6 wks ^[22]

Data Broker Services

Detail	Information
What it is	UM service for clinical data extraction from UChart (Epic), large-scale data pulls, and enterprise data requests for research. ^[7,8]
When to use	You need a cohort, feasibility count, patient list, or clinical dataset from enterprise systems. IRB status required first. ^[7]
Portal	uhealth.service-now.com/esc — login with SSO + MFA ^[7]
Track request	uhealth.service-now.com/esc?id=my_requests ^[7]
Pre-request tool	Epic SlicerDicer (in UChart) for exploratory cohort scoping before a formal Data Broker request ^[8]
Required attachments	IRB letter, protocol, complete variable list with definitions ^[7]

REDCap

Detail	Information
What it is	Secure, HIPAA-compliant, web-based platform for survey and database creation, chart abstraction, and e-consent. Free for all UM employees. Data hosted by UM IT. ^[16,17,18]
When to use	Chart abstraction forms, patient registries, surveys, screening logs, or e-consent workflows.
Create account	redcap.miami.edu — CaneID login, no access form required ^[18]
Support	help@med.miami.edu (subject: REDCap) — auto-routes to administrator ^[16]
Training	BCCC: MJRodriguez@biostat.med.miami.edu Calder Library: sp.library.miami.edu/subjects/biomedicaldata ^[17,23]
Best practice	Build data dictionary and validation rules before abstracting charts; pilot on 5–10 records first ^[16]

BCCC — Biostatistics Collaboration and Consulting Core

Detail	Information
What it is	Division of Biostatistics, Dept. of Public Health Sciences. Statistical support at all stages: study design, data analysis, grant development, manuscript preparation. All work involves MS- and PhD-level biostatisticians. ^[9,11]
When to use	Regression, survival analysis, multivariable modeling, matching, sample size/power calculations, formal statistical plans. ^[9]
Director	Dr. Shari Messinger, PhD — areas include diabetes, clinical trials, biomarkers ^[9]
Administrator	Maria Jimenez-Rodriguez MJRodriguez@biostat.med.miami.edu 305-243-4465 ^[9,10,11]
Fees	Initial consultation (scope/design discussion) free. Subsequent support: \$105/hour. CTSI can provide matching funds for collaboration plans. ^[10,11]
Lead-in times	Grant biostatistics: 6+ weeks Statistical analysis: ~3 weeks Abstracts: ~1 month minimum ^[10]
Service models	Short-term (project-specific, hourly) Collaborative Plans (ongoing, e.g. 0.25 FTE) Grant collaboration (% effort in budget) ^[10,11]
Office Hours (free, 30 min)	Tue/Wed/Fri 10 am–12 pm; Wed/Fri 2–4 pm. Quick advice only — no data analysis or manuscript writing ^[10]
Request form	redcap.miami.edu/surveys/?s=WNTYWKAWAHM3P7TK ^[9]

Calder Library — Evidence Synthesis and Data Services

Detail	Information
What it is	Louis Calder Memorial Library supports Miller School, UHealth, and Jackson Health System. Services include systematic review collaboration, evidence synthesis, literature search training, citation management, and biomedical data services. All services free to UM/JHS users. ^[12,13,26]
When to use	Systematic reviews, scoping reviews, meta-analyses, focused literature searches, citation manager setup, Covidence access.
Evidence Synthesis Coordinator	John Reynolds jxr1327@med.miami.edu medguides.library.miami.edu/evsynth ^[12]
Collaboration Track	Full co-authorship partnership: search strategy, Covidence setup, manuscript methods section. Waitlist typical — contact early. ^[12,13]

Consultation Track	Guided self-directed reviews: strategy consultation, training, acknowledgments attribution. Shorter wait. ^[12]
General reference / training	reference@med.miami.edu Mon–Fri 9 am–5 pm via Zoom (5 business days' notice for group sessions) ^[26]
Covidence	Free unlimited institutional license for all UM residents, faculty, and staff ^[19]
Databases supported	MEDLINE/PubMed, Embase, Cochrane, Scopus, Web of Science, PsycINFO, CINAHL, and others ^[12,13]
Citation managers	EndNote, RefWorks, Zotero — training and setup available ^[26]

UM Writing Center

Detail	Information
What it is	One-on-one writing support for clarity, flow, organization, and concision. Available to all UM students, residents, and faculty. Specialized consultations for grants, manuscripts, abstracts, posters, and presentations. ^[14,15]
When to use	Any stage of manuscript or abstract writing.
General appointments (50 min)	miami.mywconline.com ^[14]
Research / manuscript consults	medwritingcenterum.youcanbook.me ^[15]
Location	Online ^[15]
CTSI Research Writing	miamictsi.org/resources/support-services/ — faculty, post-docs, graduate students ^[25]

UM Libraries — Open Access and Publishing Support

Detail	Information
What it is	UM Libraries supports affiliated authors with APC funding agreements and the Scholarship@Miami institutional repository. Active agreements as of April 2026: PLOS, IOP, Wiley, Frontiers, Cambridge University Press, Company of Biologists, RSC. ^[27]
Eligibility	Corresponding author must be a current UM affiliate. Use @miami.edu email at submission. ^[27]
Open Journal Finder	university-of-miami.openjournalfinder.com/journals/?has_active_deal=true ^[27]
Institutional repository	scholarship.miami.edu — deposit accepted manuscripts for open access
OA Contact	Jason Cohen, Digital Publishing Specialist — j.cohen4@miami.edu
General libraries contact	reference@med.miami.edu ^[26]
